

Copper & Aluminum Rods

for a connected world

COPPER Energya Metals

Unmatched Purity. Unrivaled Performance

Our high-purity, electrolytic copper rods are the benchmark for efficiency and reliability in electrical applications.

Key features

>99.99% Conductivity:

Maximizes electrical flow efficiency, reducing energy loss and operational costs.

Superior Surface Quality:

Ensures flawless wire drawing, minimizing breaks and production downtime.

Excellent Ductility & Elongation:

Allows for consistent drawing into ultra-fine wires for diverse applications, from delicate electronics to heavy-duty windings.

Low Oxygen Content:

Enhances resistance to embrittlement and failure, ensuring long-term product integrity.

Standards

ASTM B491

Applications

Power cables (LV, MV, HV)

Magnet and transformer windings

Building wires & conductors

Automotive and telecommunications cables

The Lightweight Champion of Conductivity

Our aluminum rods offer an optimal balance of conductivity, light weight, and cost-effectiveness, without compromising on performance.

Key features

Excellent Conductivity-to-Weight Ratio

Ideal for applications where weight savings are critical, such as overhead power lines and aerospace cabling.

High Corrosion Resistance:

Forms a protective oxide layer, ensuring longevity and durability in harsh environments.

Exceptional Formability:

Facilitates easy extrusion and drawing for complex profiles and consistent wire production.

Proven Cost-Efficiency:

Delivers reliable performance at a lower overall project cost, optimizing your budget.

Standards

ASTM B233

Applications

Overhead power transmission lines (AAC, AAAC, ACSR)

Busbars and electrical conductors

Automotive and aviation wiring

Industrial machinery and equipment

ALUMININALUM

PROCESS

Melting & Refining

Raw Material Preparation

Input:

99.99% electrolytic copper cathodes 99.7% primary aluminum ingots

Quality Assurance:

Spectroscopic purity testing Raw material traceability

Copper

1150°C under protective atmosphere

Aluminum:

750°C in controlled gas environment

Alloying:

Precise element addition per product grade

2

3

Continuous Casting

Method:

Properzi continuous casting system

Output Size:

Copper rod: 8mm diameter
Aluminum rod: 9.5mm diameter

Cooling

Controlled water quenching

Hot Rolling & Forming

Process:

Multi-stand hot rolling mill

Temperature:

Copper: 850°C Aluminum: 500°C

Final Diameter:

12mm-20mm (customizable)

4

Packaging & Dispatch

Automatic Coiling: 2–5 ton coils

Protective Packaging:

Weather-resistant, corrosion-protected

Certification:

ISO 9001:2015 compliant with batch traceability

Quality Control & Testing

 $\square =$

Electrical Conductivity: Copper: 101% IACS Aluminum: 61% IACS

Mechanical Tests:

Tensile strength, elongation, surface inspection

Dimensional Checks:

Laser micrometers, tolerance ±0.1mm

Copper RodsTechnical Data Sheet

energy Metals

Description

Energya Pure Copper Rods are manufactured to Grade C11020 in accordance with ASTM B491, and are primarily used for wires and cables.

Diameter: Ø8.0mm ±0.38mm Standard Compliance: ASTM B491

Mechanical Properties

| Tensile Strength | Elongation % Min. |
|------------------|----------------------|
| (N/mm2) | (250mm Gauge Length) |
| 228 ± 3 | 30% ± 2 |

Surface is clean and free from Imperfections Surface Oxide Max: 750 Å

Electrical Properties

| Conductivity (% IACS) | |
|--------------------------|--|
| 100% | |

Chemical Properties

| Element | Unit | ASTM B491 Requirement |
|----------------------|------|--------------------------|
| Copper (Cu), max. | % | 99.9% |
| Oxygen Content, min. | ppm | 400 |

Packaging

Polyethylene Sheet wrapped, strapped on wooden pallets

Description

EC Grade 1350 Pure Aluminum Rods are manufactured using Continuous Casting and Rolling (CCR) technology, ensuring high conductivity and mechanical reliability.

Diameter: Ø9.5mm ±0.5mm Standard Compliance: ASTM B233

Aluminum Rods

Technical Data Sheet

Mechanical Properties

| Temper | Tensile Strength (Mpa) | Elongation % Min. (250mm Gauge Length) |
|--------|---------------------------|---|
| H11 | 80-95 | 10 |
| H12 | 83-117 | 4 |
| H14 | 103-138 | 4 |

Electrical Properties

| Temper | Resistivity (Ω·mm²/m) | Conductivity (% IACS) |
|--------|--------------------------|--------------------------|
| H11 | 0.02785 | 61.9% |
| H12 | 83-117 | 61.5% |

Chemical Composition

| Element | ASTM B233 Requirement |
|---------------------------------------|--------------------------|
| Aluminum (AI), min. | 99.6% |
| silicon (Si), max. | 0.1% |
| ron (Fe), max. | 0.4% |
| Copper (Cu), max. | 0.05% |
| Manganese (Mn), max. | 0.01% |
| Magnesium (Mg), max. | 0.03% |
| Chromium (Cr), max. | 0.01% |
| Zinc (Zn), max. | 0.05% |
| Gallium (Ga), max. | 0.03% |
| /anadium (V) + Fitanium (Ti), max. | 0.02% |
| Boron (B), max. | 0.05% |
| Others (each), max. | 0.03% |
| Others (total), max. | 0.1% |
| | |

Packaging

Coil Weight 2000 kg $\pm 10\%$ Internal Diameter Ø550–600 mm External Diameter Ø1300–1340 mm Coil Height 850–900 mm Polyethylene Sheet wrapped, strapped on wooden pallets

Why choose Energya Metals?

Uncompromising Quality Control

Every batch is rigorously tested to meet international standards (ASTM, BS, IEC).

Technical Expertise

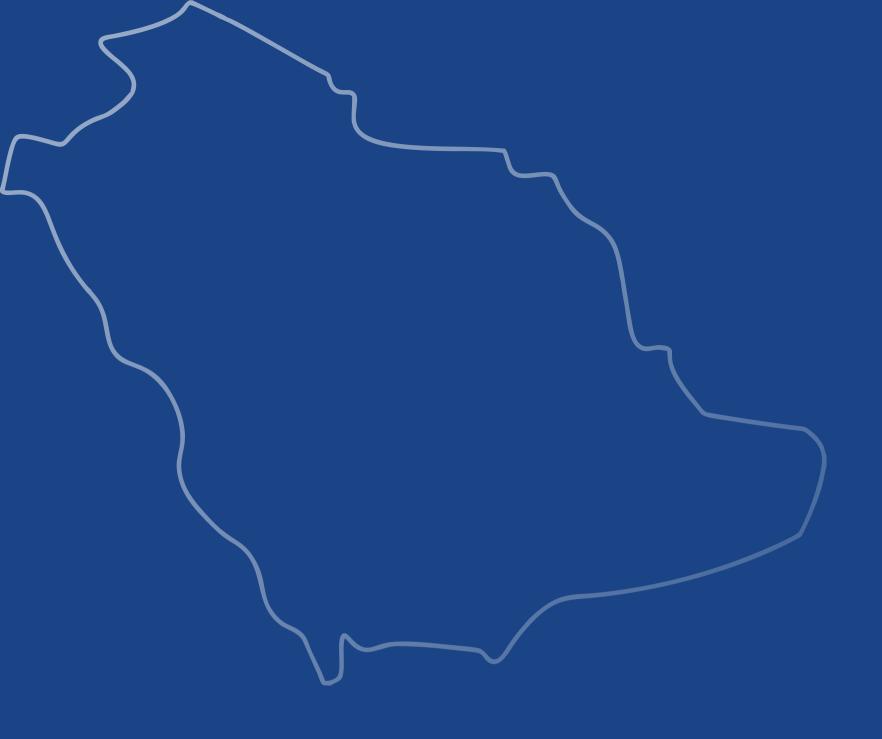

Our metallurgists and engineers provide unparalleled support, from product selection to application optimization.

Sustainable Sourcing

We are committed to responsible and traceable material sourcing, supporting your ESG goals.

Global Reach, Local Impact

With a robust supply chain, we deliver consistency and reliability wherever your projects are.

Kickstart Your Project with the Right Foundation
